Prevent Pivot Span Cable Theft

With copper wire theft becoming a more prevalent problem for center pivot owners, the NetIrrigate® *NETTB11-PIV* can be configured to guard against span cable burglars. Whether your pivot is stopped or running, an instant cell phone notification can be sent to desired recipients in the event your span cable is cut.

In addition to span cable theft detection, the *NETTB11-PIV* also provides the following pivot monitoring services.

Safety Stop Alerts	The NETTB11 will send text, voice, or e-mail notifications to recipients in the event a pivot stops. Target recipients can be configured by calling (800) 961-9549 or by logging into netirrigate.com.
Remote Shutdown	The remote shutdown features enables users to remotely stop a pivot via a phone call or the NetIrrigate® website. Most customers setup a speed dial entry in their cell phone with the pivot name and associated phone number. For security purposes, the NETTB11 can be configured to only accept remote shutdown calls from certain phone numbers.
Global Positioning	The GPS option allows for the degree position of your pivot to be monitored via the NetIrrigate® website. Alerts can also be configured to call you when your pivot reaches a desired degree position. For example, you can instruct your pivot to call you when it crosses 90°. In essence, this feature can act as a virtual stop-in-slot.
Pressure Watch	The pressure watch feature requires an additional pressure switch (supplied by Net Irrigate) mounted in a threaded outlet near the end tower. A separate alert can be configured if the operating pressure of your systems falls outside a desired band.

Local dealer / supplier contact information:
